

The Cambridge Strategy

Asian Markets Alpha Programme

Firm Background:

The Cambridge Strategy is a specialist asset management company based in London with offices in Hong Kong and Australia. Leveraging on our experienced teams, the firm offers currency alpha, active currency overlay and emerging markets equities programmes. The Cambridge Strategy is owned by its three senior principals: Edward Baker (former CIO of Emerging Markets at AllianceBernstein); Peter Henricks (former CEO of AllianceBernstein) and Russell Thompson (former Head of Trading for Asia at AIG Trading). Collectively, they have over 70 years experience in the investment management industry and bring a diverse and distinctive set of skills to the Cambridge Strategy. In 2009 and 2010, the firm won the award for Best FX Manager from Hedge Fund Review and in 2010 it has been shortlisted for Currency Manager of the Year by Professional Pensions Magazine and European Pensions Magazine.

<i>Chris Udy</i>	Director of Research	Mount Row Capital	11
<i>Tony Henry</i>	Head of Operations	European COO, Balyasny Asset Management	29

Background to the Programme:

The Asian Markets Alpha Programme commenced trading in February 2006 as a managed account for an institutional client. Performance from February 2006 refers to an equal weighted average of the managed accounts invested via the Asian Markets Alpha Programme.

Investment Approach:

The Asian Markets Alpha Programme aims to profit from short and medium term moves in the Asian market currency pairs. To achieve this, the firm employs a systematic approach, designed to perform across diverse market environments. The process combines two types of trading strategies: a Systematic Technical Strategy and a Systematic Fundamental Strategy.

The Systematic Technical Strategy uses a series of proprietary trading algorithms operating over eight timeframes ranging from four-hourly timeframes to weekly. The algorithms combine trend continuation and trend reversal signals. The Systematic Fundamental Strategy reflects a predetermined set of positions designed to reflect 'market' views on the relative attractiveness of Asian currencies versus the US dollar. Assets are allocated to the Systematic Fundamental Strategy based on a proprietary measure of volatility in the global currency markets (in highly volatile markets the allocation is reduced and when volatility is low the allocation is increased).

The Cambridge Strategy believes that long term success is achieved through successful mitigation of downside returns (with risk controlled at the portfolio, strategy and individual trade levels). A daily VAR limit is enforced at both the aggregate portfolio and sub-strategy level and a further layer of risk mitigation is incorporated within each separate strategy. For the Systematic Technical Strategy each trade is given a risk allocation based on our assessment of the appropriate Risk Adjusted Trade Size (RATS). The RATS is set weekly using a proprietary methodology and profit and loss levels are set for each position prior to trade execution to further limit downside risk. Within the Systematic Fundamental Strategy, the aggregate net US dollar exposure is maintained at zero.

Programme Description:

Description:	Absolute Return – Currency – Asia
Target Returns:	18% per annum
Target Daily Volatility:	14% per annum (based on daily observations)
Investment Style:	Active Currency Management – Systematic (Technical and Fundamental)
