| Days to Recovery | 1 |
| % Trading Days Up | 57% |
| % Trading Days Down | 43% |
| Average Up Day | 0.67% |
| Average Down Day | (0.77%) |

Market conditions remained challenging in October, however, the Programme returned +2.44% for the month and +7.23% YTD (this is the 5th consecutive positive month during these extreme market conditions).

Unprecedented market moves occurred in October, as political uncertainty was added to the mix (with Central Banks and the G7 intervening in markets in an attempt to improve sentiment). This was largely ineffective, with some currency pairs having intraday moves in excess of 10%. Further, the US Dollar rallied strongly during the month against both the major and Asian currencies.

Risk aversion remained high during the month, with our Global Volatility Indicator reaching its highest ever level (as a consequence, we are some way away from contemplating initiating a Systematic Fundamental Strategy allocation); and our Systematic Technical Strategy currently accounts for all the Programme's allocations.

Liquidity remains an issue, however, our risk budget is relatively low by historical standards, and we remain confident that we are comfortably within our 24 hour liquidation policy guideline, even in these adverse conditions. The key positions that contributed positively to performance during the month were short the Korean Won, Singapore Dollar, Taiwan Dollar and Australian Dollar. We remain long the Japanese Yen, which also produced positive returns this month.

During the month, drawdowns remained contained. As many of you are aware, our Tail Risk Indicators remain high, limiting risk, and our uncorrelated "Hard" VaR remains close to our Monte-Carlo VaR, as the notional number of positions has significantly declined in the last several months.

The application of our risk management system has positively contributed to performance during these extreme market conditions, and we remain very confident that risk will remain well controlled, and risk adjusted returns will remain high. Market conditions remain poor and many longer-term positions have been closed out; as short-term flows are dominating market moves. Currently, we do not see current conditions improving dramatically, but towards the end of the month, volatility did decline to more sensible levels, and we believe that the conditions are certainly in place for the Programme to continue to generate alpha, and for our negative correlation to many asset classes to continue to bring benefits for our investors.

Cambridge Strategy Asian Markets Alpha Monthly Returns

| Year | YTD | Jan | Feb | Mar | Apr | May | Jun | Jul | Aug | Sep | Oct | Nov | Dec |
